Quarto Presentations

Create beautiful interactive slide decks with Reveal.js

2026+041

Hello, There

This presentation will show you examples of what you can do with Quarto and Reveal.js, including:

- Presenting code and LaTeX equations
- Including computations in slide output
- Image, video, and iframe backgrounds
- Fancy transitions and animations
- Activating scroll view

…and much more

Pretty Code

- Over 20 syntax highlighting themes available
- Default theme optimized for accessibility

```r
# Define a server for the Shiny app
function(input, output) {

  # Fill in the spot we created for a plot
  output$phonePlot <- renderPlot({
    # Render a barplot
  })
}
```

Code Animations

- Over 20 syntax highlighting themes available
- Default theme optimized for accessibility

```r
# Define a server for the Shiny app
function(input, output) {

  # Fill in the spot we created for a plot
  output$phonePlot <- renderPlot({
    # Render a barplot
    barplot(WorldPhones[,input$region]*1000,
            main=input$region,
            ylab="Number of Telephones",
            xlab="Year")
  })
}
```

Line Highlighting

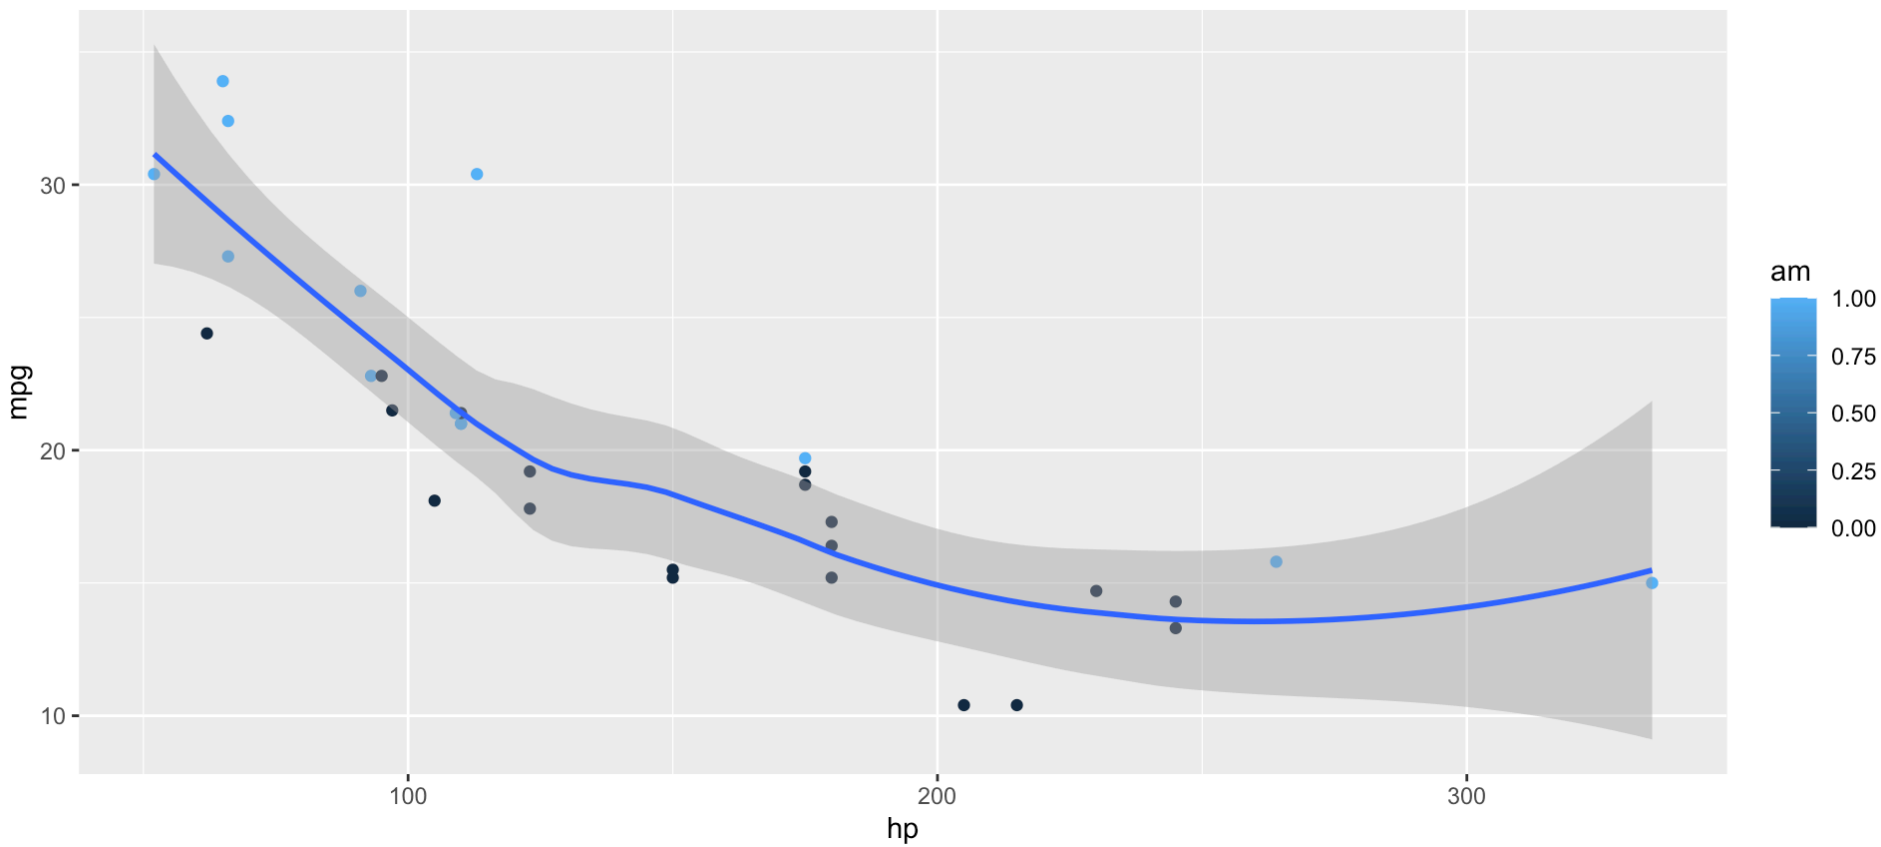
- Highlight specific lines for emphasis
- Incrementally highlight additional lines

```python
import numpy as np
import matplotlib.pyplot as plt

r = np.arange(0, 2, 0.01)
theta = 2 * np.pi * r
fig, ax = plt.subplots(subplot_kw={'projection': 'polar'})
ax.plot(theta, r)
ax.set_rticks([0.5, 1, 1.5, 2])
ax.grid(True)
plt.show()
```

Executable Code

```r
library(ggplot2)
ggplot(mtcars, aes(hp, mpg, color = am)) +
  geom_point() +
  geom_smooth(formula = y ~ x, method = "loess")
```



LaTeX Equations

MathJax rendering of equations to HTML

```latex
\begin{gather*}
a_1=b_1+c_1\\
a_2=b_2+c_2-d_2+e_2
\end{gather*}

\begin{align}
a_{11}& =b_{11}&
  a_{12}& =b_{12}\\
a_{21}& =b_{21}&
  a_{22}& =b_{22}+c_{22}
\end{align}
```

$$\begin{aligned} a_1 &= b_1 + c_1 \\ a_2 &= b_2 + c_2 - d_2 + e_2 \end{aligned}$$

$$\begin{aligned} a_{11} &= b_{11} & a_{12} &= b_{12} \\ a_{21} &= b_{21} & a_{22} &= b_{22} + c_{22} \end{aligned}$$

Column Layout

Arrange content into columns of varying widths:

Motor Trend Car Road Tests

The data was extracted from the 1974 Motor Trend US magazine, and comprises fuel consumption and 10 aspects of automobile design and performance for 32 automobiles.

	mpg	cyl	disp	hp	wt
Mazda RX4	21.0	6	160	110	2.620
Mazda RX4 Wag	21.0	6	160	110	2.875
Datsun 710	22.8	4	108	93	2.320
Hornet 4 Drive	21.4	6	258	110	3.215
Hornet Sportabout	18.7	8	360	175	3.440
Valiant	18.1	6	225	105	3.460

Incremental Lists

Lists can optionally be displayed incrementally:

- First item
- Second item
- Third item

Insert pauses to make other types of content display incrementally.

Fragments

Incremental text display and animation with fragments:

Fade in

Slide up while fading in

Slide left while fading in

Fade in then semi out

~~Strike~~

Highlight red

Slide Backgrounds

Set the `background` attribute on a slide to change the background color (all CSS color formats are supported).

Different background transitions are available via the `background-transition` option.

Media Backgrounds

You can also use the following as a slide background:

- An image: `background-image`
- A video: `background-video`
- An iframe: `background-iframe`

Absolute Position

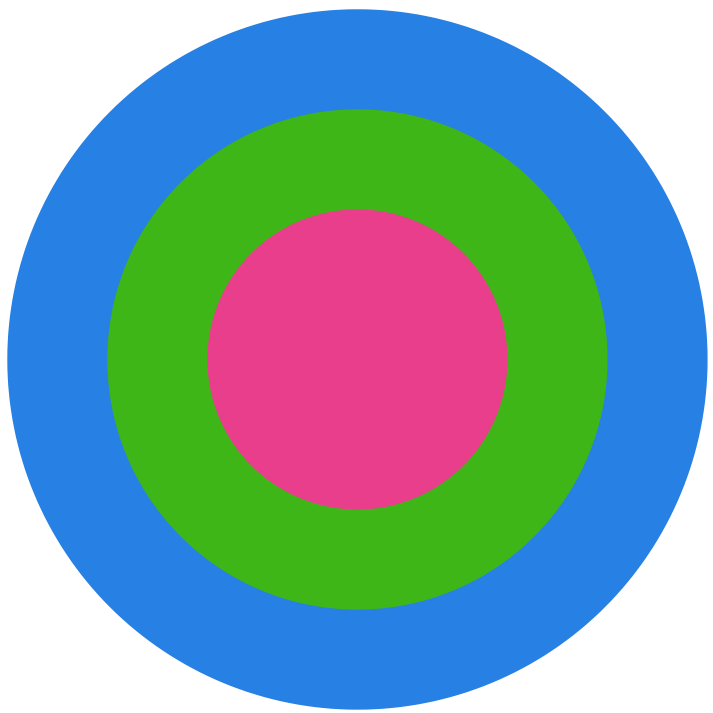
Position images or other elements at precise locations

Auto-Animate

Automatically animate matching elements across slides with Auto-Animate.

Auto-Animate

Automatically animate matching elements across slides with Auto-Animate.



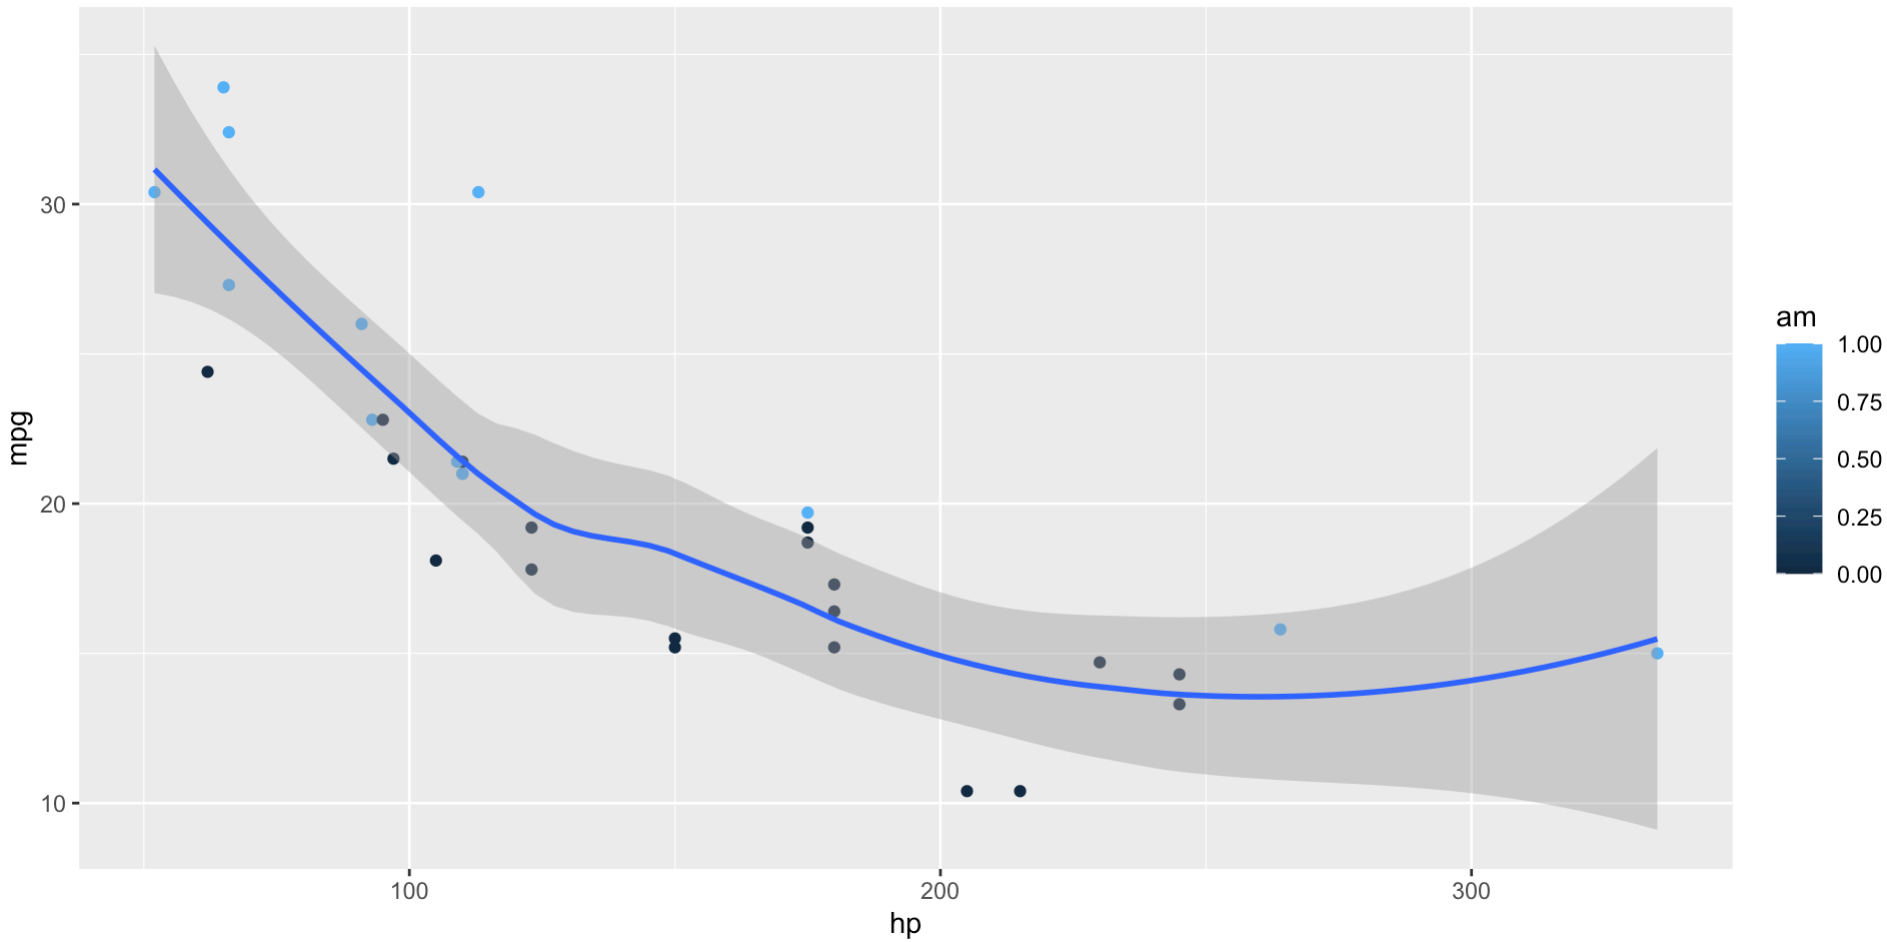
Slide Transitions

The next few slides will transition using the `slide` transition

Transition	Description
`none`	No transition (default, switch instantly)
`fade`	Cross fade
`slide`	Slide horizontally
`convex`	Slide at a convex angle
`concave`	Slide at a concave angle
`zoom`	Scale the incoming slide so it grows in from the center of the screen.

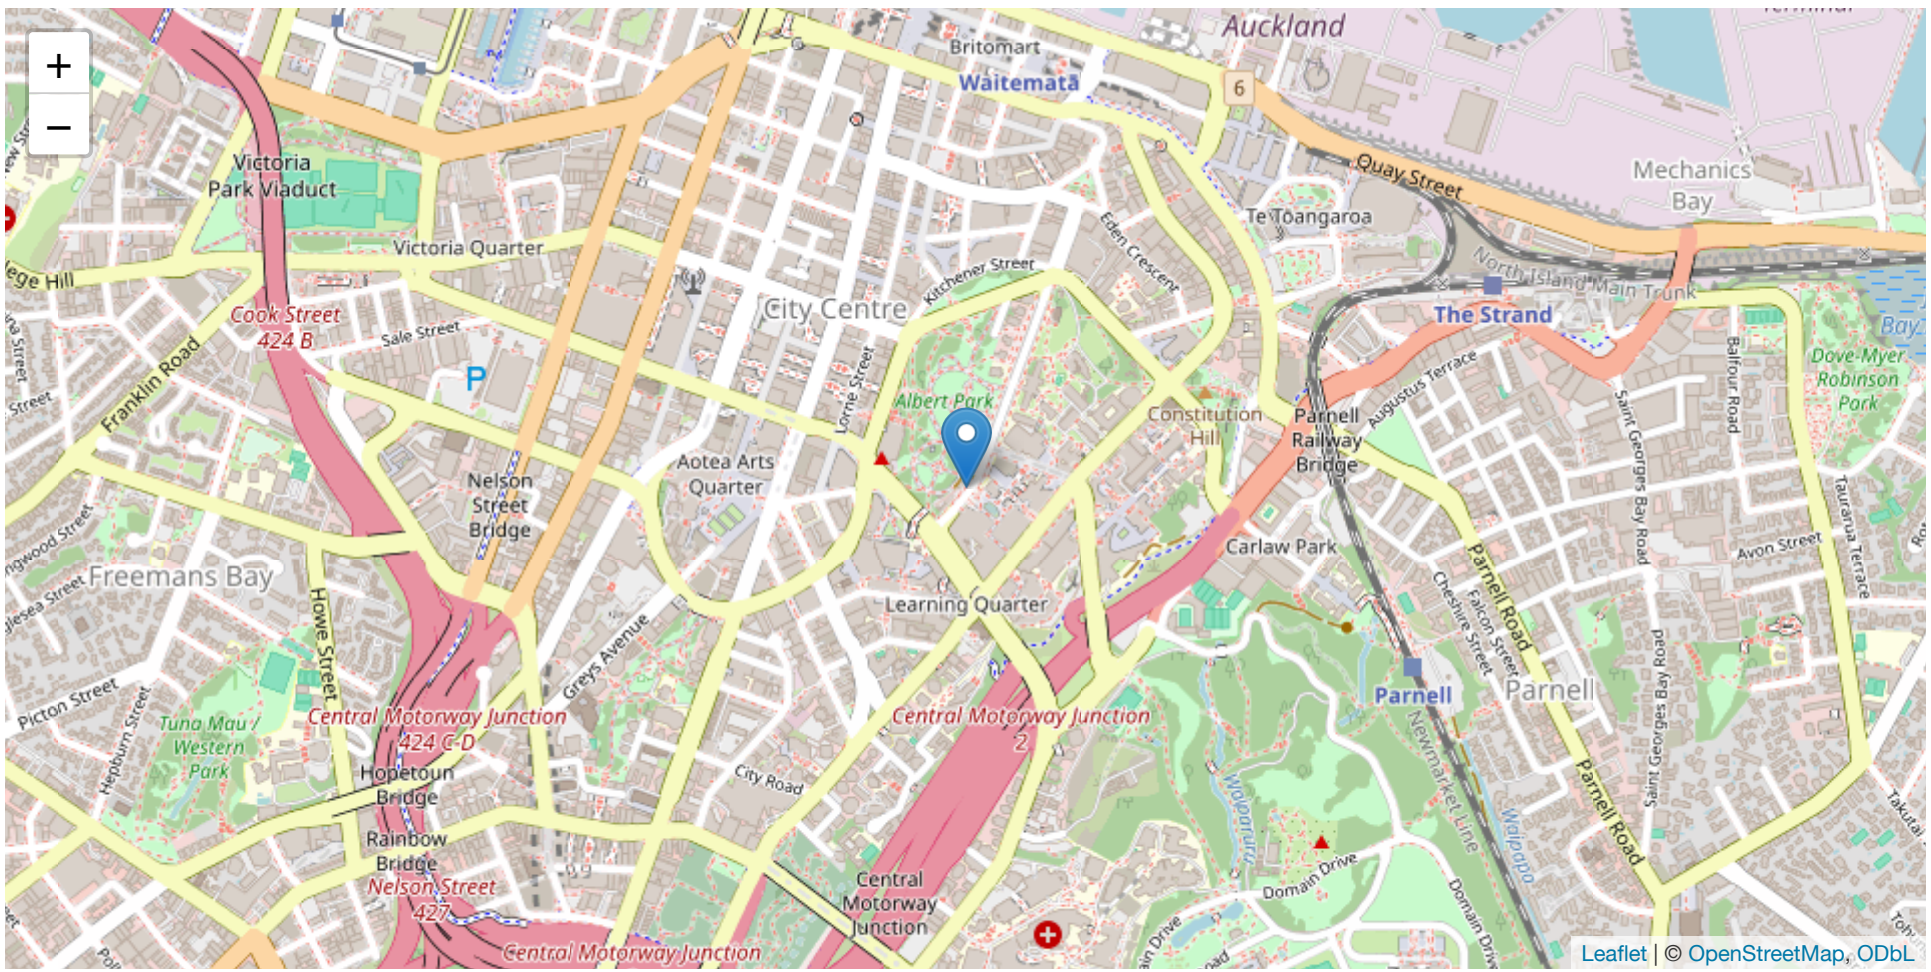
Tabsets

Plot Data



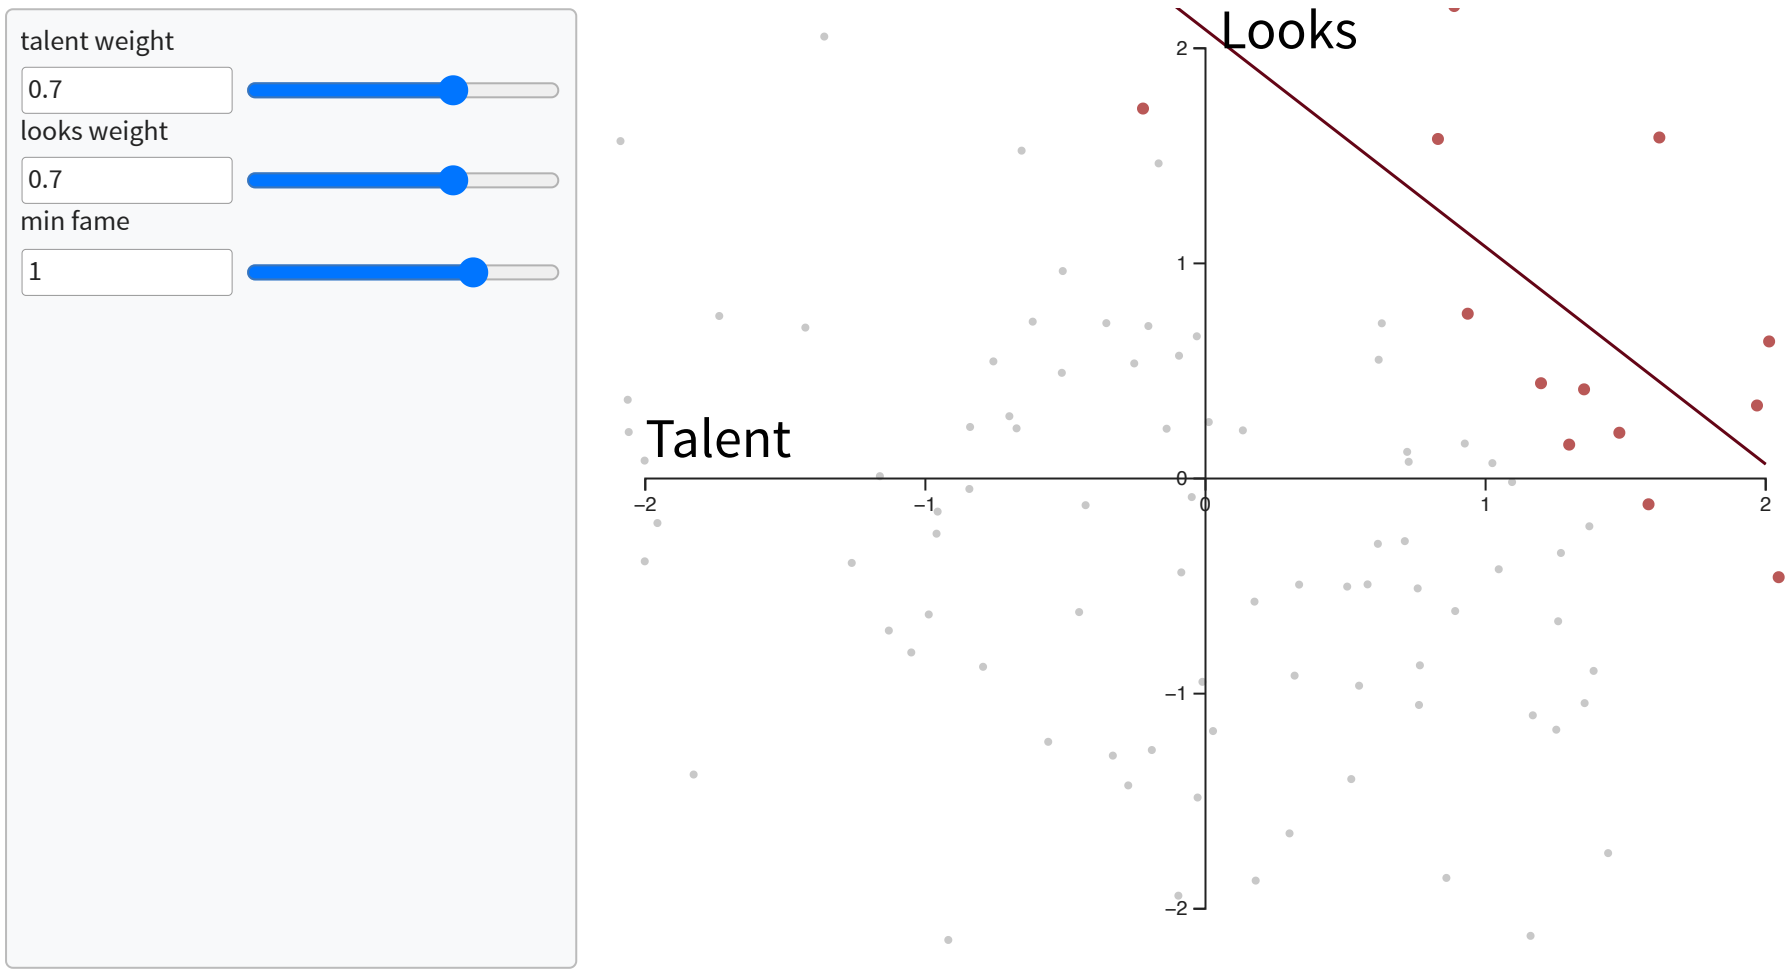
Interactive Slides

Include Jupyter widgets and htmlwidgets in your presentations



Interactive Slides

Turn presentations into applications with Observable and Shiny. Use component layout to position inputs and outputs.



Preview Links

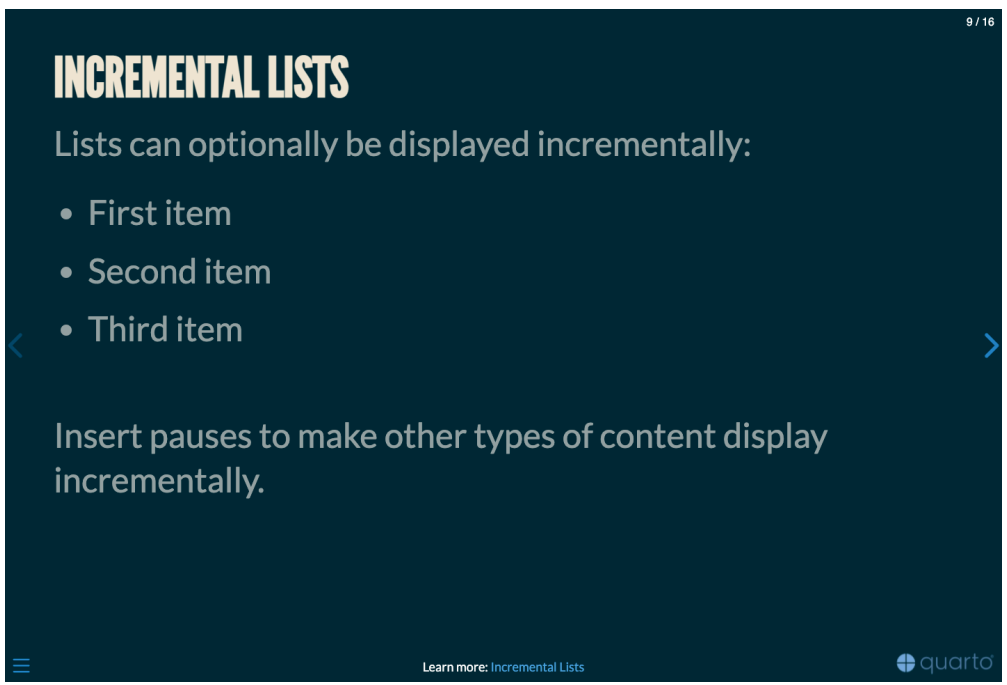
Navigate to hyperlinks without disrupting the flow of your presentation.

Use the `preview-links` option to open links in an iframe on top of your slides. Try clicking the link below for a demonstration:

Matplotlib: Visualization with Python

Themes

10 Built-in Themes (or create your own)



Easy Navigation

Quickly jump to other parts of your presentation

≡ Toggle the slide menu with the menu button (bottom left of slide) to go to other slides and access presentation tools.

You can also press `m` to toggle the menu open and closed.

You can also press `g` to toggle 'Jump To Slide' modal box to quickly go to one of your slide using its number or id.

Jump To Slide

Quickly jump to other parts of your presentation

Chalkboard

Free form drawing and slide annotations

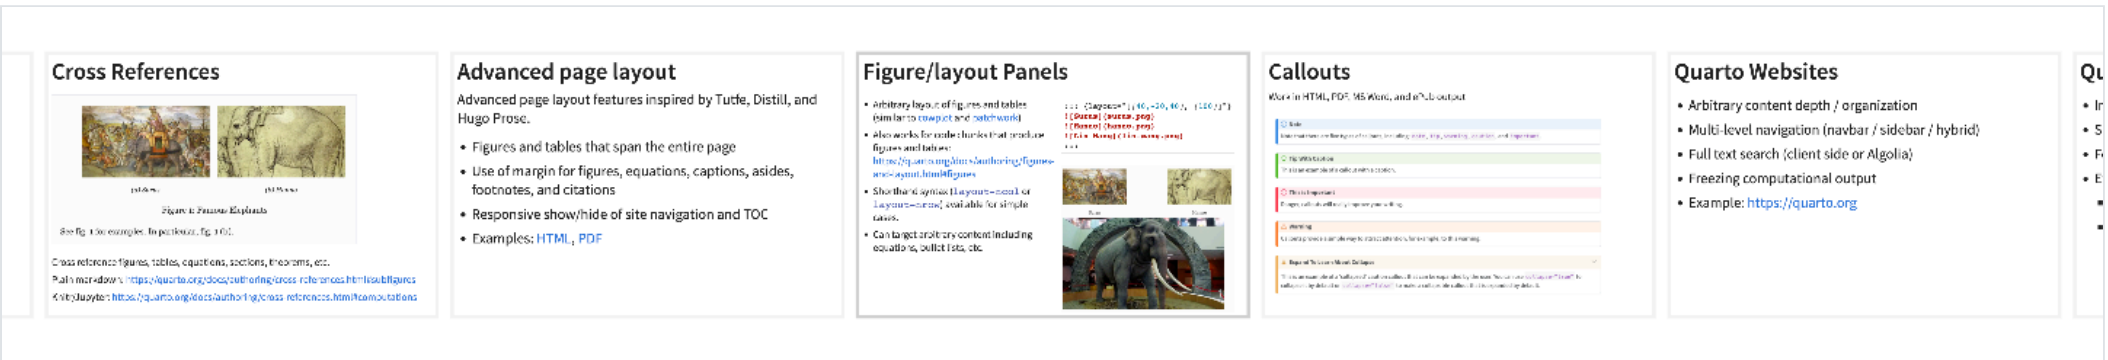
- Use the chalkboard button at the bottom left of the slide to toggle the chalkboard.

- Use the notes canvas button at the bottom left of the slide to toggle drawing on top of the current slide.

You can also press `b` to toggle the chalkboard or `c` to toggle the notes canvas.

Point of View

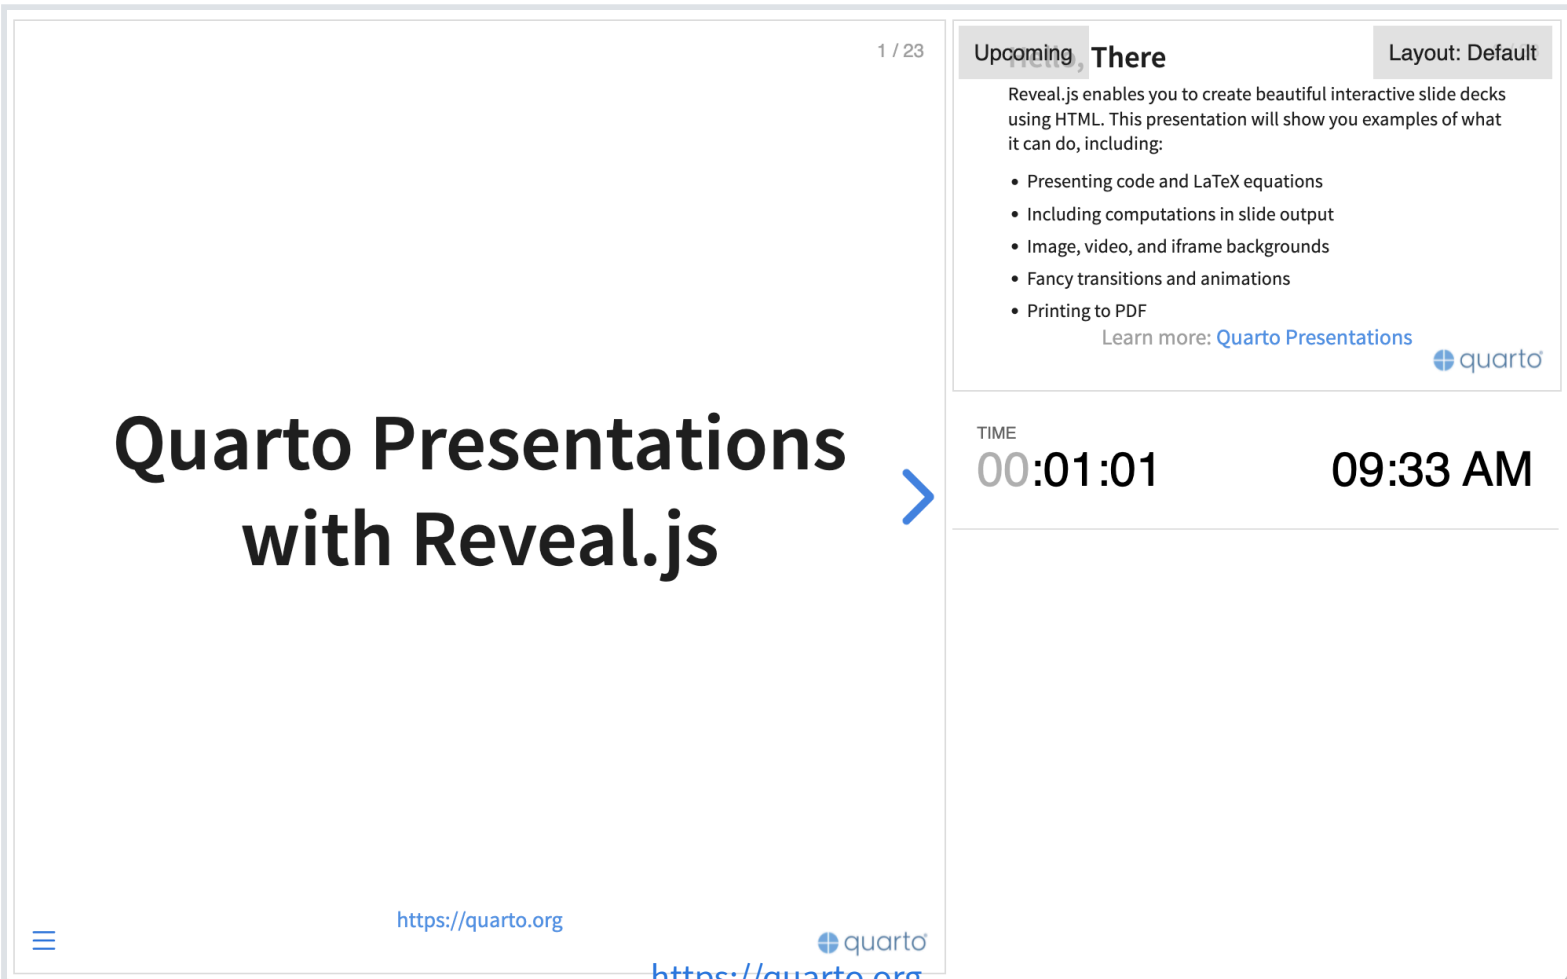
press `o` to toggle overview mode:



Hold down the `Alt` and click on any element to zoom towards it—try it now on this slide.

Speaker View

press `s` (or use the tools in presentation menu ☰) to open speaker view



https://quarto.org

Scroll View

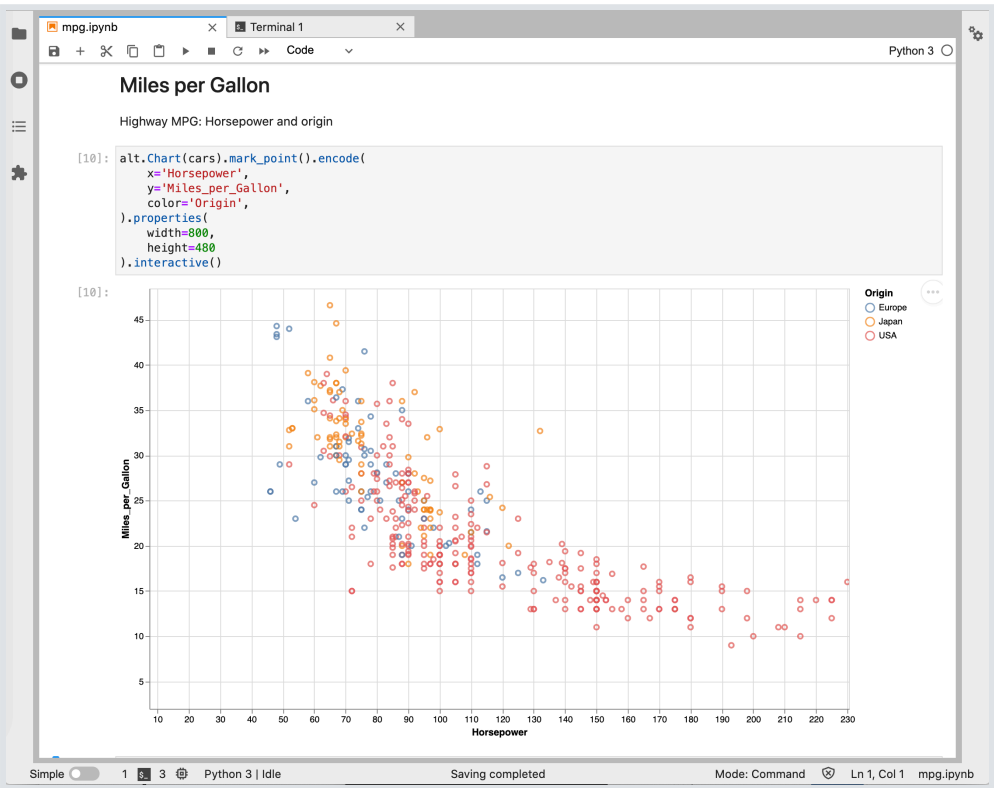
Press `r` (or use the tools in presentation menu) to open scroll view

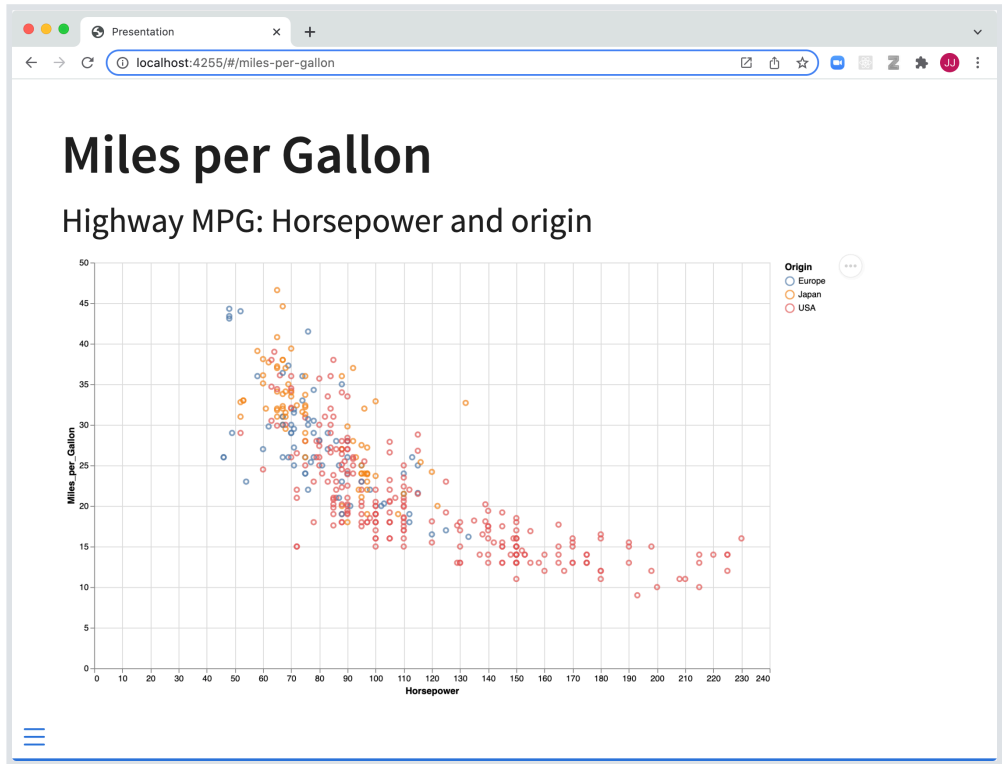
Try it now on this slide — You'll see a scroll bar on the right and you can scroll down the presentation using your mouse.

Scroll view behavior can be configured using `scroll-view` configuration.

Authoring Tools

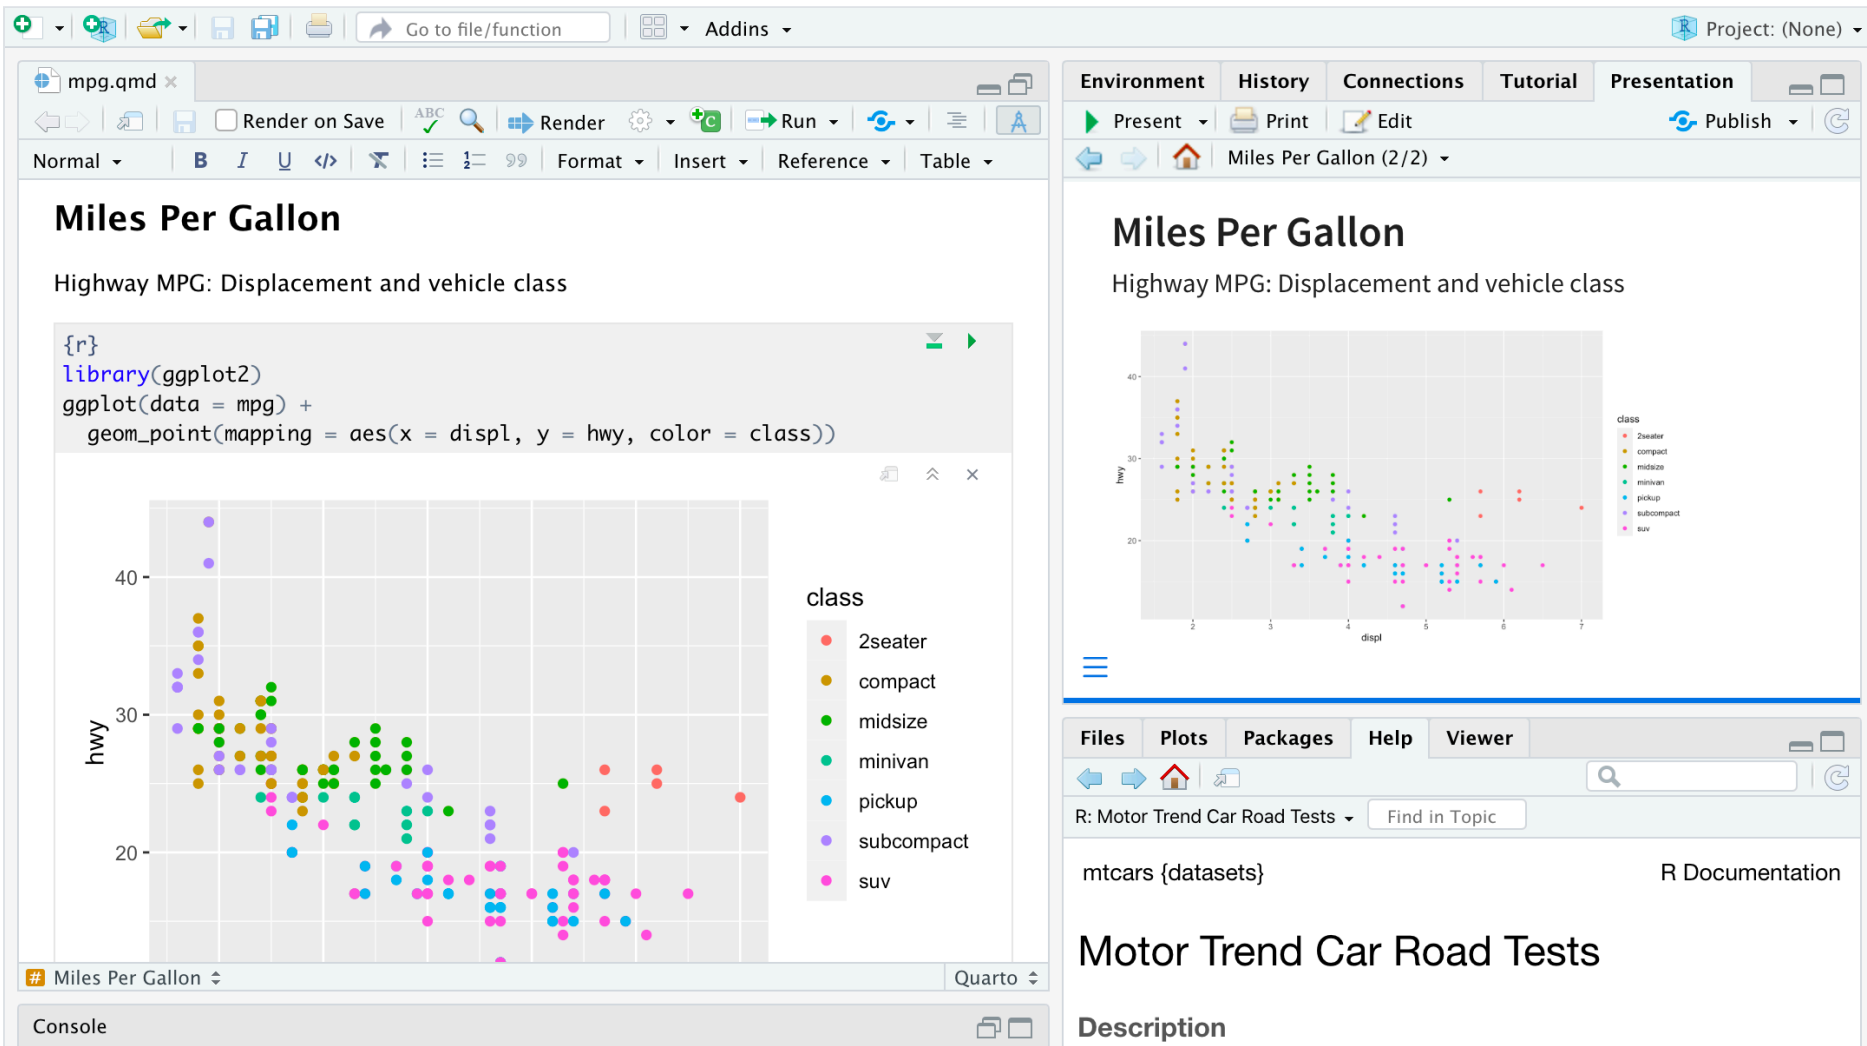
Live side-by-side preview for any notebook or text editor including Jupyter and VS Code





Authoring Tools

RStudio includes an integrated presentation preview pane



https://quarto.org

quarto

And More…

- Touch optimized (presentations look great on mobile, swipe to navigate slides)
- Footer & Logo (optionally specify custom footer per-slide or hide global footer)
- Auto-Slide (step through slides automatically, without any user input)
- Multiplex (allows your audience to follow the slides of the presentation you are controlling on their own phone, tablet or laptop).
